Set compiler options in RADStudio

C.H. van Immerzeel

14 November 2018

1. Create a new configuration (preferably in "/OPTSETS" folder)

- View / Configuration Manager / create a new option set / choos "DELPHI personality""

2. Set active configuration for the selected projects

- View / Configuration Manager
- Select projects (the same projects where the new build configuration was added)
- Select active configuration

3. Add a reference to an option set

- View / Configuration Manager
- Select projects (the same projects where the new build configuration was added)
- Add a reference to an option set
- Select newly added build configuration
- Browse to newly created option set
- Press "Add reference" and "Close"

4. Specify compiler target in individual projects

- In Project manager / select project / right click / options
- Specify (newly created) compiler target
- If present: remove (old) existing references.

Modify an existing option set

- View / Configuration Manager / Edit an option set
